

Inna Ryzhykh

Running & triathlon coach · Kyiv, Ukraine

I read Garmin data the way a coach does and turn it into content runners can act on: are easy runs really easy, how load builds up, what HRV and running dynamics actually show.

BUILT ON GARMIN

A running dashboard on the Garmin personal API key

A year of running on one page: easy vs. hard, load and recovery, aerobic progress, technique. Published with a free step-by-step guide in **English, Ukrainian and Russian**. My application to the **Garmin Connect Developer Program** is approved; I'm building a training app for my athletes on top of it.

Every run against the easy ceiling from the watch's own HR zones.

NEXT VIDEOS

01 Should you trust Garmin's automatic HR zones?

Zones and thresholds in detail: how Garmin sets them, when auto-detected lactate threshold is accurate, when to adjust manually.

02 Why slow running matters, and how to measure it right

Easy running through heart rate data: wrist sensor vs. chest strap, and the Garmin settings that make the numbers trustworthy.

03 What a year of Garmin data says about your training

A coach reads a full season: easy/hard balance, load and recovery, aerobic progress.
